

SD – internal pull-up, always enabled
SYNC – For combining multiple regulators. Just GND if not used

REMEMBER TO CHECK PWR FLAGS AND COHERENCY

RECALCULATE / double check
THIS IS FOR 6–8.4V INPUT
(BULK CAPS AND inductor value)

The Diode IS a Schottky Diode although the symbol shows otherwise
could choose a diode with lower VRRM for even more efficiency (20–30V instead)

Worst Case, 3V3 Pads
for powering externally
